### DATAWIND POCKETSURFER2

£180 inc VAT • [widget.co.uk](http://widget.co.uk)

Accessing bite-sized internet pages using a device that fits in your pocket is nothing new, but the PocketSurfer2 provides the 'real' web almost anywhere in the UK - for free.

Datawind uses sophisticated scaling technology to ensure that the pages sent to the device are much smaller in size than those viewed on an internet-connected PC or laptop. Some sacrifices are made in image quality and you won't have much luck with video clips, but Datawind has delivered on its promise to allow pretty much any static page on the net to be viewed on the PocketSurfer2 in just a few seconds.

The 640x240 resolution screen is far from top-notch, while moving the cursor using the navipad is fairly slow. However, there are quick-access keys for certain apps.

The PocketSurfer2 is a one-trick pony, but you won't find a better solution to access the web while out and about.
